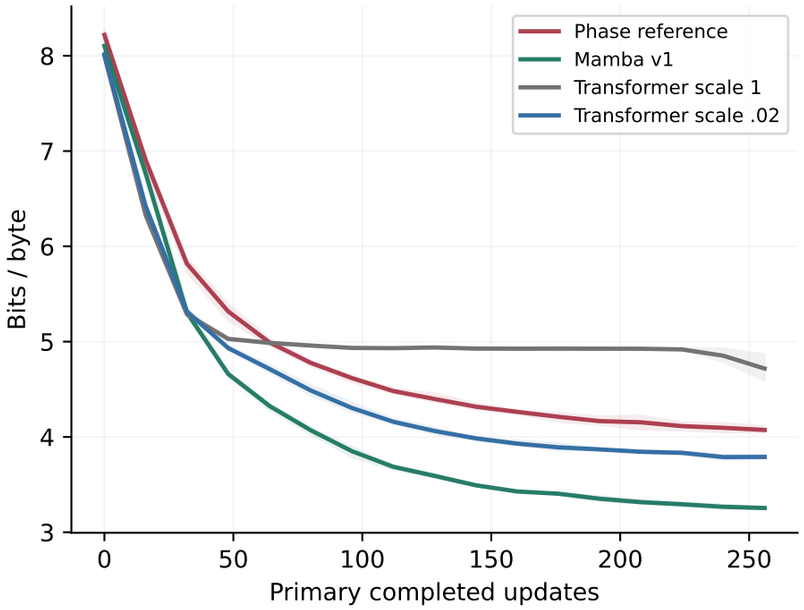
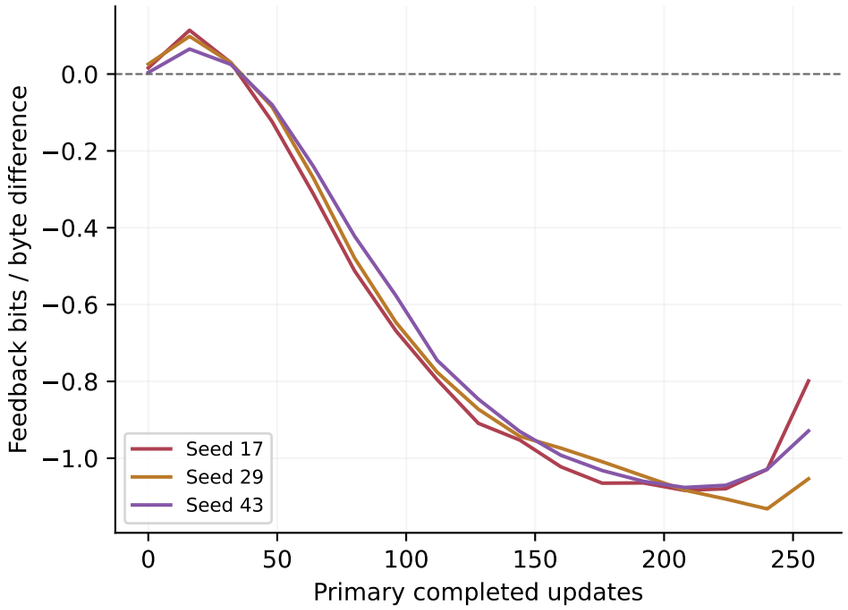
Replicated algorithmic diagnosis — seeds 17 / 29 / 43; feedback only; cold audit unopened
Bands show observed seed ranges, not confidence intervals. Delay 0 has only four unique inputs.

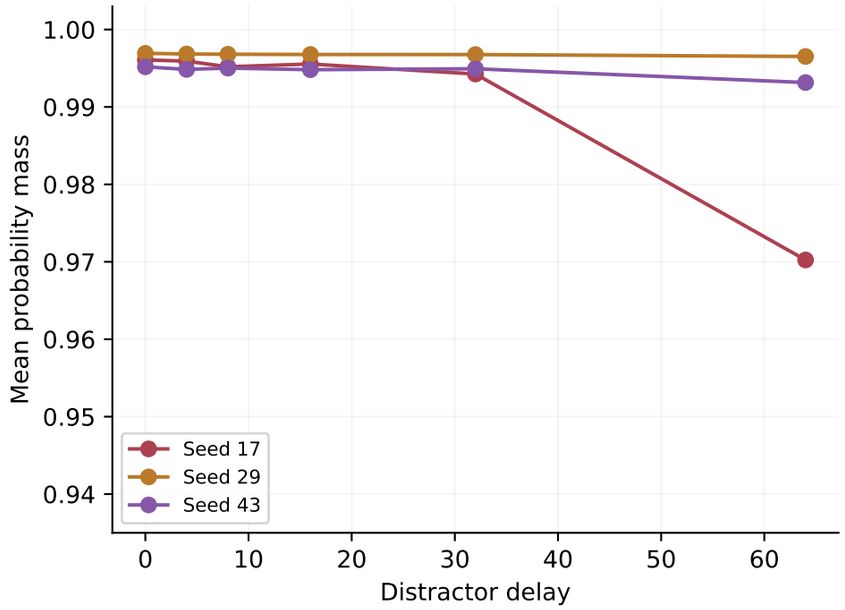
Text: mean feedback over three seeds



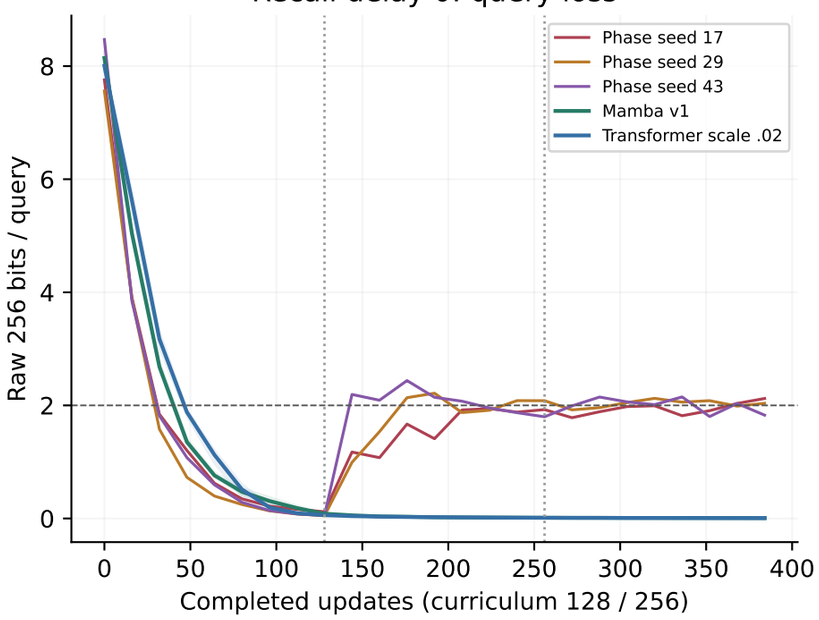
Paired scale .02 minus scale 1



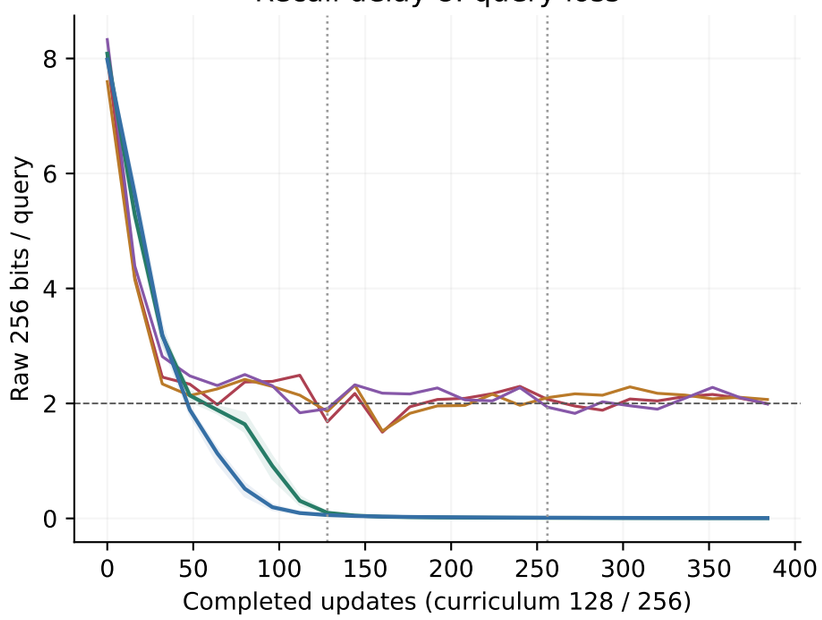
Phase: final A–D probability mass



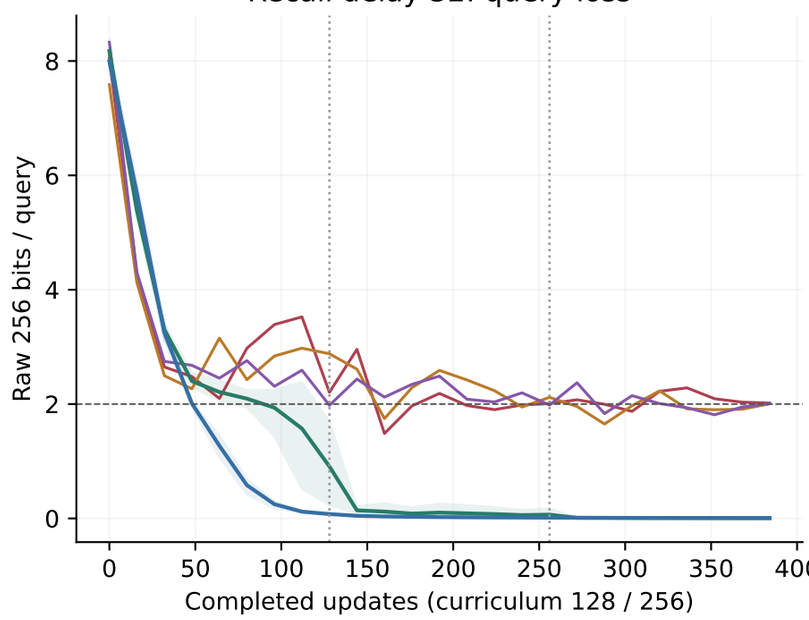
Recall delay 0: query loss



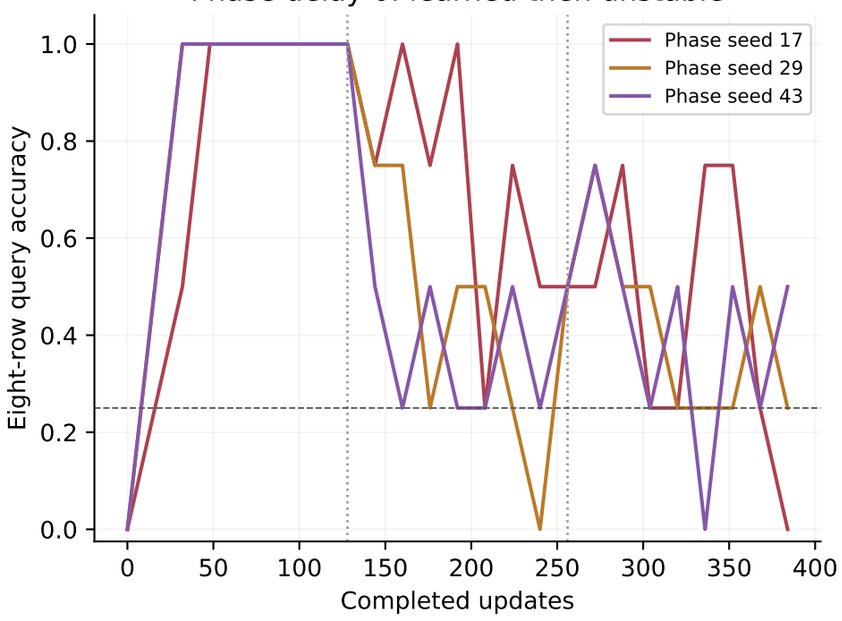
Recall delay 8: query loss



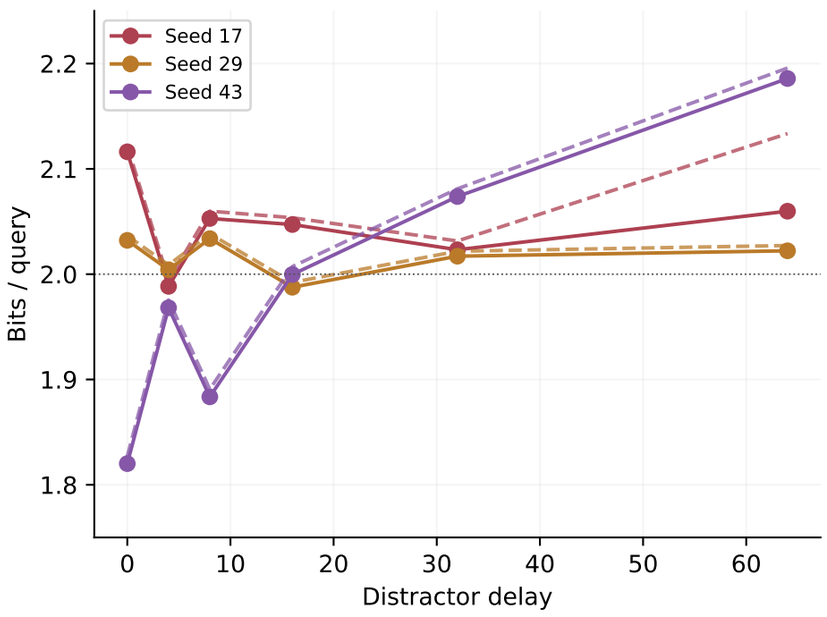
Recall delay 32: query loss

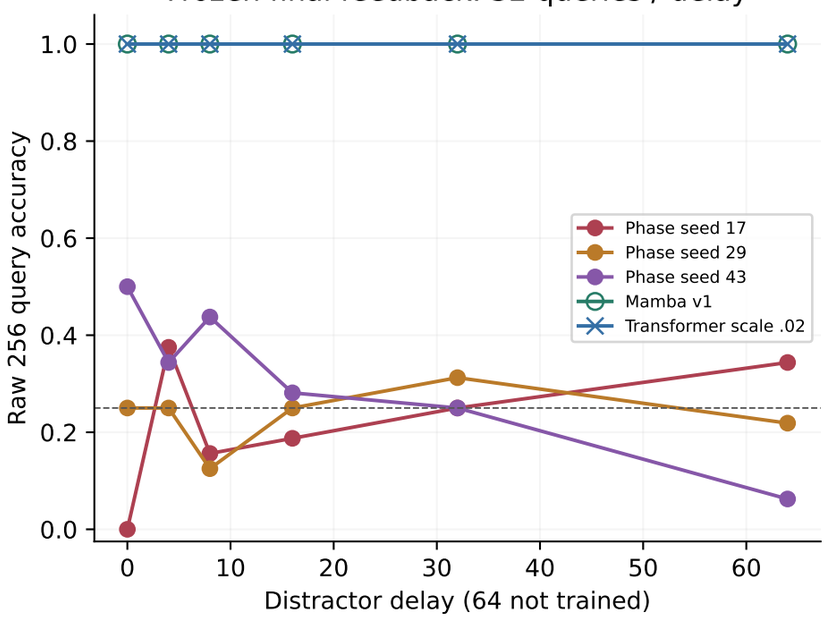


Phase delay 0: learned then unstable



Phase final loss: raw dashed / A–D solid





Frozen final feedback: 32 queries / delay
