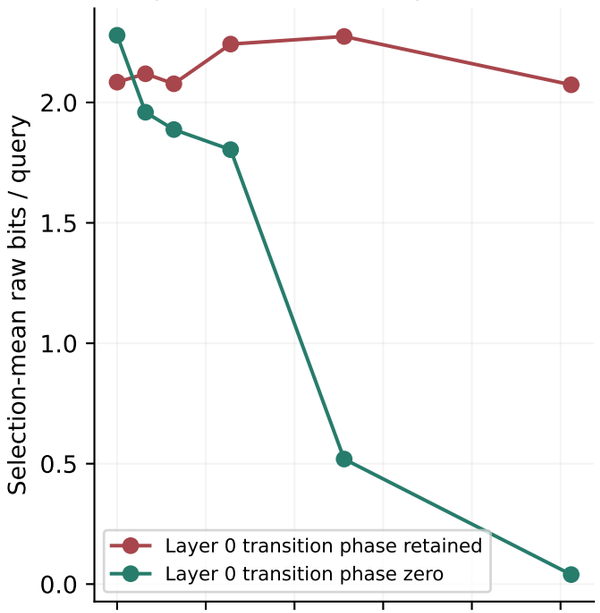
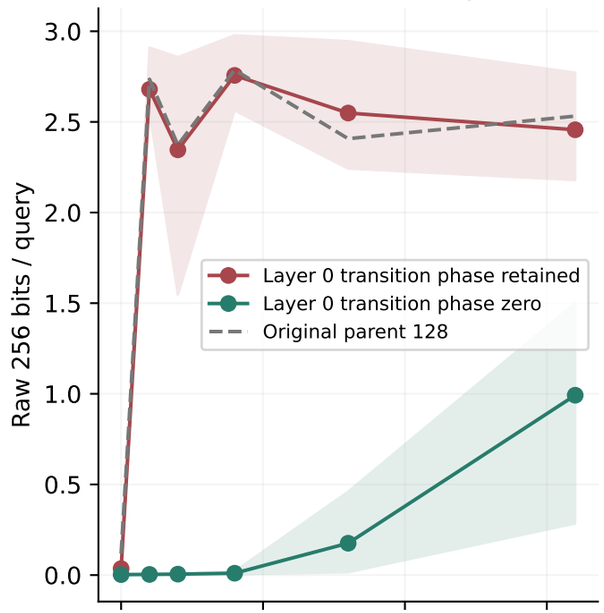
Paired layer 0 transport contrast — seed 17, same 256 training batches; cold audit unopened
Panel bands show observed feedback range, not confidence intervals; native panels use 8 rows per delay.

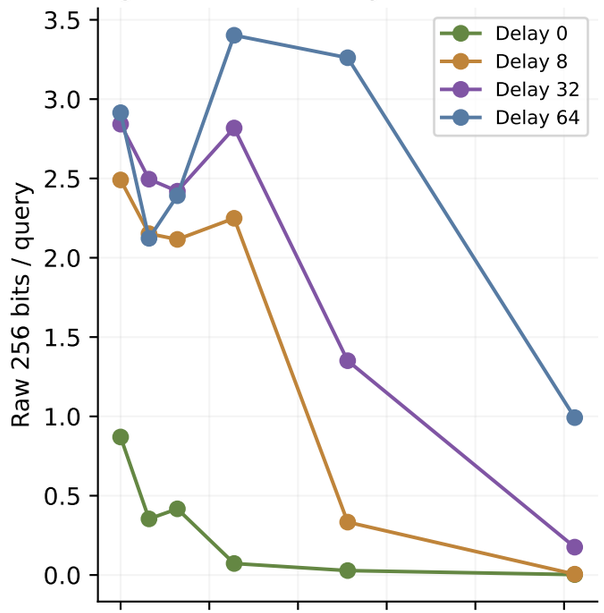
Zero-update harm; later paired learning



Final raw loss and feedback-panel range

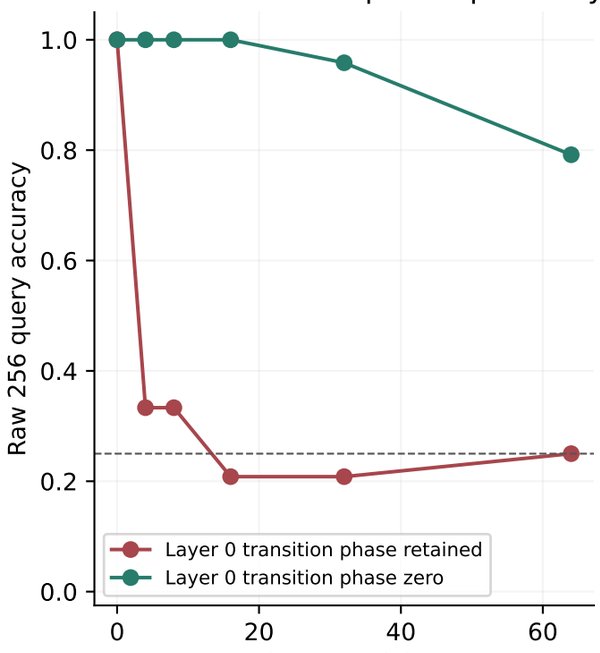


Omega 0 branch: delayed recall develops



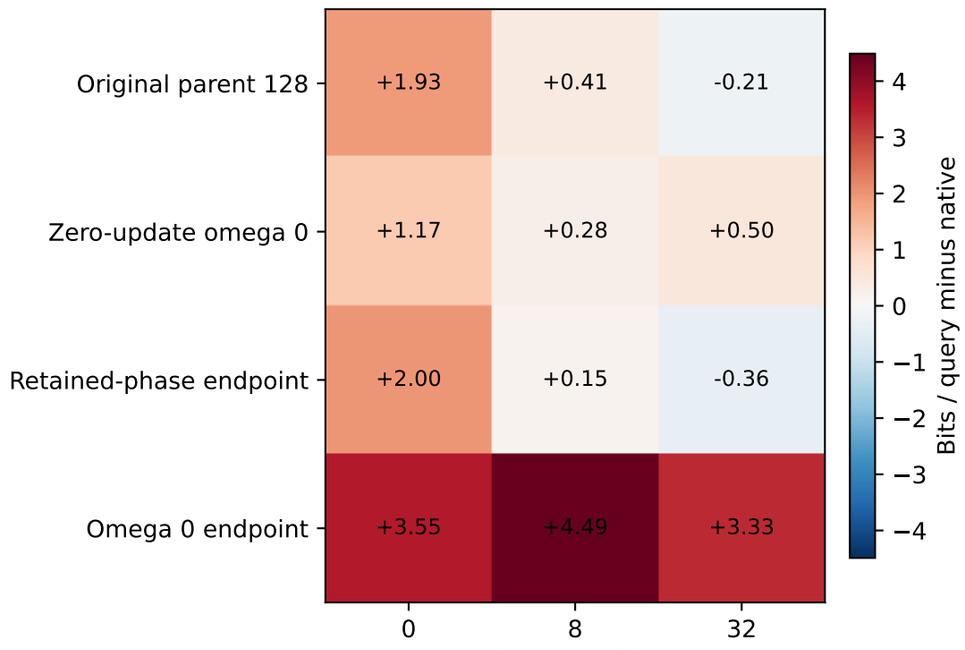
Continuation updates from checkpoint 128

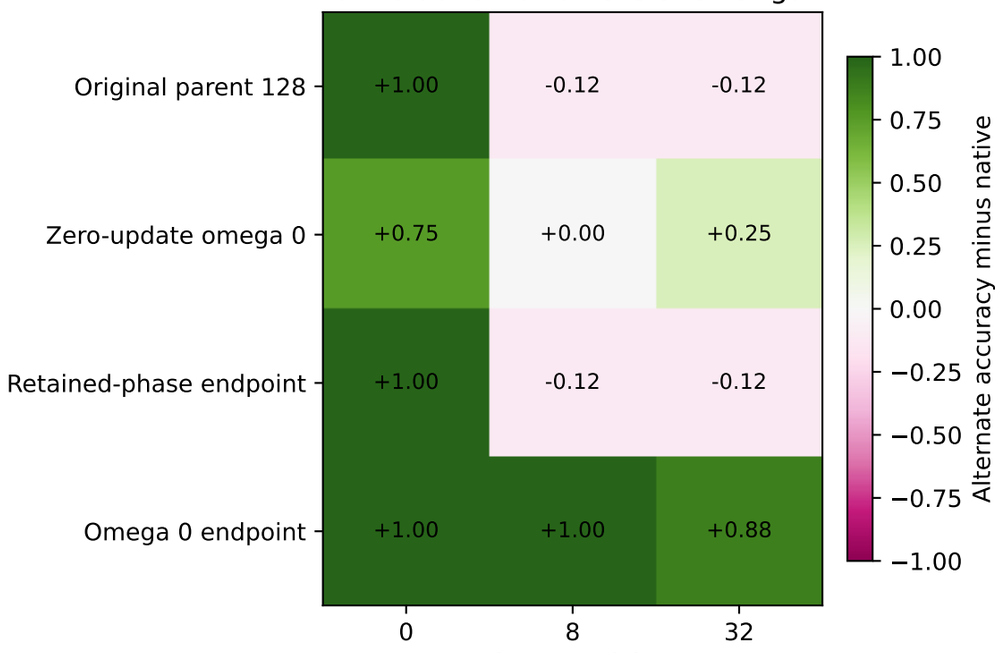
Final feedback: 24 queries per delay



Distractor delay (64 not trained)

Native clear-all: learned recall cost



Continuation updates


Native donor: alternate-answer gain
